THE FIRST STAGE OF SELECTING A BASIN & FURNITURE UNIT IS FINDING OUT WHAT YOU WILL BE NEEDING TO STORE, NOT JUST CURRENTLY, BUT YOU ALSO NEED TO THINK ABOUT ITS USE IN THE FUTURE. WHETHER IT IS GOING TO BE USED BY ONE PERSON OR FIVE PEOPLE, IT WILL NEED TO CATER TO EVERYONE'S NEEDS.

WALL MOUNTED UNITS

The ultimate space saving option, wall mounted furniture is fixed off the floor and gives bathrooms the illusion of more space. They are often found in contemporary styles and their usability is always the focus when designing new styles. Cleaning is made easier which is perfect for family bathrooms.

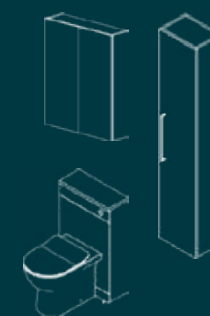

FLOOR STANDING UNITS

If extra storage space is what you need, then have a look at our floor standing furniture. These units come with shelving to help you to store more of, and organise, your toiletries, plus they help to hide the pipework, creating a much tidier space.

COUNTERTOP UNITS

For a more contemporary style, units with countertops can offer both form and function. More internal storage space is available as well as countertop space to hold soaps and lotions whilst giving a luxurious look, and they can work on both wall mounted and floor standing units.

ADDITIONAL UNITS

Extra storage space can be found through our tall side units and mirror cabinets. The tall units can store a plethora of items thanks to their height and shelving, whilst the mirror cabinets are perfect for storing toiletries and any items you use regularly. There are also WC units so that if you want a concealed cistern, you can hide it whilst ensuring that the furniture look is consistent.

THE CHOICE OF TOILET FOR YOUR BATHROOM DEPENDS NOT ONLY ON THE PRACTICALITY OF IT, BUT ALSO THE STYLE YOU WANT. WHETHER YOU WANT TO SAVE SPACE OR WANT TO OPT FOR SOMETHING A BIT MORE CLASSIC, WE WILL HAVE AN OPTION PERFECT FOR YOUR NEEDS.

CLOSE COUPLED

The most popular choice, close coupled toilets are found in many family bathrooms. These toilets show an exposed cistern installed on the pan. There are lots of designs from contemporary to traditional. Ours sit fully back to the wall to cover pipework which creates a seamless look and is ideal for cleaning.

—

CLOSE COUPLED OPEN BACK

Just like the standard close coupled toilet, the open back version still has the cistern fitted with the pan, but the pan itself will have a gap at the back to allow access to the pipework. These have a slightly more traditional look, but are still sleek in design.

—

BACK TO WALL

Back to wall toilets sound similar to the close coupled toilets, but the cistern is concealed in a wall rather than sitting on the back of the pan. This gives the toilet a contemporary style and helps to save space as these pans are often shorter in projection in comparison to close coupled toilets.

—

WALL MOUNTED

The most modern of them all, a wall mounted or wall hung toilet is a great option for space saving. These toilets are when the pan is floating off the floor which allows you to clean underneath the pan and save on floor space. They are usually best placed in small, cloakroom bathrooms, and they can hold up to 400kg in weight when paired with a framed cistern.

BRASSWARE

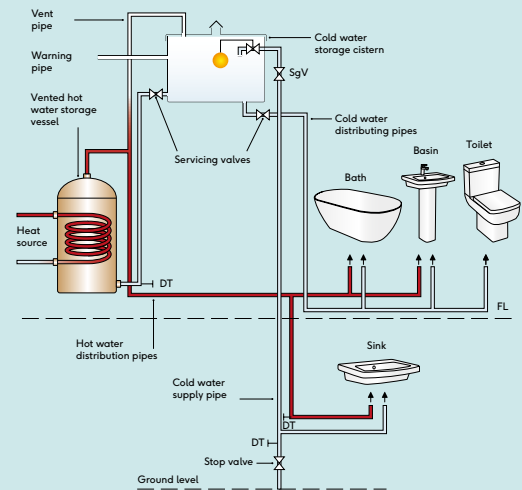

TO HELP YOU SELECT THE OPTIMUM BRASSWARE FOR YOUR PROJECT, WE HAVE MARKED OUR PRODUCTS WITH THE PRESSURE REQUIREMENT.

THIS IS REPRESENTED AS FOLLOWS:

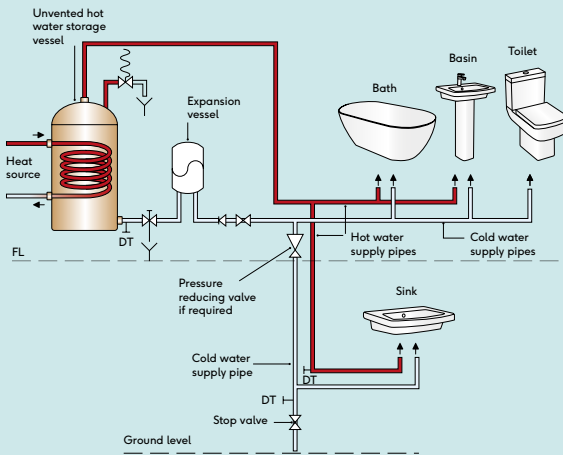

- LP** – MINIMUM 0.2 BAR
- MP** – MINIMUM 0.5 BAR
- HP** – MINIMUM 1.0 BAR

FIGURE 1

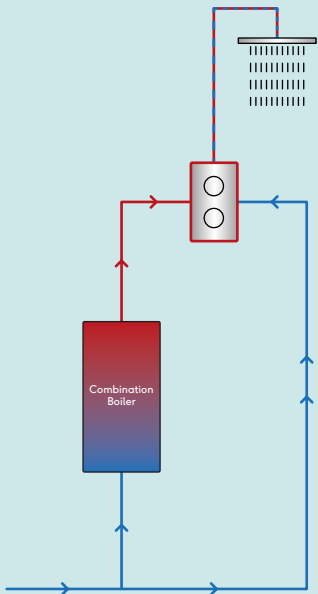

Cold water is stored in a header tank which feeds the hot water tank, and usually the cold water to the bathroom. This means the water is delivered at low pressure and therefore only taps with LP or minimum 0.2Bar (2 metre Head) can be used. If the header tank is in the loft space and the taps are on the ground floor the pressure may be higher so taps marked MP 0.5 bar (5 meter head) may be able to be used. You will need to check your requirements with your plumber as, if a power shower is required a pump will need to be fitted.

FIGURE 2

The unvented cylinder stores hot water at mains pressure, usually between 2 and 3 bar, allowing hot and cold water to be delivered at the same pressure. This means a power shower can be achieved without the need of a pump. All LP, MP and HP taps and fittings may be used.

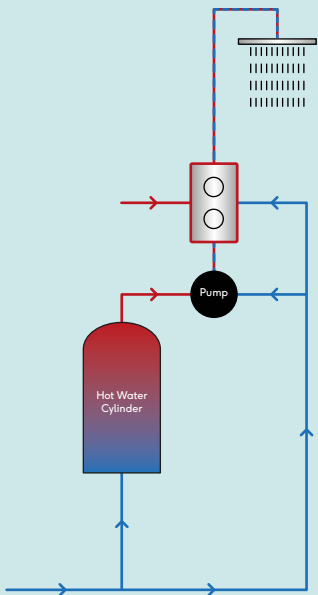

FIGURE 3

A combination boiler heats water on demand, and although it is fed by mains pressure this is regulated to the speed which the boiler can heat the water.

All LP and MP taps and fittings may be used.

FIGURE 4

A pump assisted system will deliver water at high pressure and depending on the specifications of the pump fitted LP, MP and HP taps and fittings may be used.
